[Portfolio: portfolio-tejashs.netlify.app](https://portfolio-tejashs.netlify.app)

SUMMARY

Information Science graduate with hands-on experience across 3 internships in software development, full-stack, and AI/LLM analytics, specializing in building scalable web platforms, real-time systems, and intelligent user-centric products using the MERN stack, Docker, and Kubernetes

SKILLS

- **Languages:** JavaScript, TypeScript, Python, C++
- **Frontend:** React.js, Next.js, HTML, CSS, Tailwind
- **Backend:** Node.js, Express.js
- **Databases:** MongoDB, MySQL
- **Cloud & DevOps:** AWS, Docker, Kubernetes
- **Tools:** Git, Postman, Scaffold
- **Concepts:** REST APIs, OOPS, DSA, WebSockets, OAuth, Microservices, Prompt Engineering

EDUCATION

Bachelor of Engineering in Information Science Engineering JSS Academy of Technical Education, Bangalore	2026 CGPA: 8.37
Class 12th Global Independent PU College, Hubli.	2022 Percentage: 78.66%
Class 10th Chinmaya English Primary School, Hubli	2020 Percentage: 82.00%

CERTIFICATIONS

Data Structures and Algorithms – Infosys Springboard (Aug 2024)
Artificial Intelligence and Machine Learning Training Course – Infosys Springboard (Dec 2024)
AWS Cloud Job Simulation – Forage with AWS (Jan 2025)
Networking Basics – Cisco Networking Academy (Dec 2024)

PROFESSIONAL EXPERIENCE

SDE Intern (PreSchool Engineering) <i>PreSecure Solutions (Internship)</i>	Aug 2025-Current
• Developed and implemented a video recording POC for the PreSchool application within a 2-day deadline, which was approved and integrated into the main application. • Designed and implemented 10+ frontend UI screens, contributing to the overall application design and user experience. • Resolved a critical APK upload bug which had caused a 2-day project delay within 1.5 days, restoring the deployment pipeline. • Led frontend development for the PreCollect project and mentored 3 new interns.	
Full Stack Development Intern <i>Dyashin Technosoft Pvt. Ltd., Bengaluru (Internship)</i>	Mar 2025-May 2025
• Developed responsive frontend components using React.js • Integrated backend APIs to enable dynamic data rendering • Participated in debugging and improving UI/UX performance	
AI & LLM Analytics Intern <i>VOIS x AICTE Virtual Internship</i>	Oct 2024-Nov 2024
• Performed data cleaning, preprocessing, and optimization across datasets totaling 11,000+ records to improve data quality for AI/LLM workflows • Experimented with prompt engineering techniques using AI tools to enhance model response quality • Gained hands-on exposure to real-world AI applications	

KEY PROJECTS

AetherIDE: AI-Powered Cloud Sandbox IDE

AI & Full Stack Project | Personal Project

Tech Stack: React, Node.js, Express.js, Kubernetes, Docker, MongoDB, Redis, RabbitMQ, Mistral AI, LangChain, LangGraph, Socket.IO

A cloud-based AI sandbox IDE that provisions isolated React environments on demand, featuring an integrated AI agent, live preview, and interactive terminal

- Built a browser-based cloud IDE that provisions isolated React + Vite sandbox environments on demand inside a Kubernetes cluster, with live preview and integrated terminal.
- Architected a microservices backend with 5 core services (auth, sandbox, AI orchestration, router, notification) each independently deployed in Kubernetes.
- Integrated Mistral AI via LangChain/LangGraph to power an in-browser AI agent that reads and writes files inside running pods with real-time hot-reloading via Vite HMR.
- Implemented Google OAuth 2.0 with JWT, Redis TTL-based sandbox lifecycle management, RabbitMQ event-driven notifications, and dynamic subdomain routing for per-sandbox pods.

Snitch: Multi-Vendor E-commerce Platform (Live | In Progress)

Full Stack Project | Personal Project

Tech Stack: React, Vite, Tailwind CSS, Node.js, Express.js, MongoDB

A full-stack multi-vendor e-commerce platform supporting complex product variants, seller dashboards, and secure OAuth-based authentication.

- Built and deployed a full-stack multi-vendor e-commerce platform using a scalable MVC architecture.
- Developed dynamic product pages with variant selection (size, color), enabling real-time updates for images, pricing, and stock status.
- Implemented secure authentication system including email/password and OAuth-based login using Google.
- Engineered RESTful APIs for product and cart management with clean architecture using DAO, services, and middleware layers.

NegotiateX: AI-Powered Negotiation Simulator

Full Stack Project | Personal Project

Tech Stack: React, Node.js, Express.js, Socket.IO, Mistral AI

A real-time AI negotiation simulator where users haggle with personality-driven AI agents powered by Mistral AI and WebSockets.

- Built a real-time AI-powered negotiation platform using WebSockets (Socket.IO) for seamless bidirectional communication.
- Integrated Mistral AI to simulate dynamic negotiation agents with distinct personalities and intent-aware pricing strategies.
- Designed conversational flows where AI agents adapt responses based on user input, negotiation context, and pricing logic.
- Engineered backend logic for dynamic pricing adjustments and decision-making strategies based on user behavior.

Moodify: AI-Powered Emotion-Based Music Player

Full Stack Project | Personal Project

Tech Stack: React, Node.js, Express.js, Computer Vision, Pre-trained ML Model

An AI-powered music player that detects user emotions through real-time facial analysis and recommends songs accordingly.

- Built an AI-powered music player that uses real-time facial expression analysis to detect user emotions.
- Integrated a pre-trained computer vision model to classify emotions (e.g., happy, sad, neutral) from live video input.
- Developed logic to map detected emotions to personalized music recommendations for adaptive playback.
